Dimensions: 21" x 12" x 6"
Frame: ExoSpine™ ILCS; ALICE/NICE compatible
Colors: Your choice
Options: Customize to your specs

Advantage: Quick ditch, easy don, lighter weight, rapid access, modular, filet opening, hang loops

Designed with maneuverability in mind, the AttackPAK system improves ergonomics through optimal weight distribution, which reduces stress and relieves fatigue so you can focus on patient care. The design eliminates pounds of parasitic weight that is found in other leading packs. AttackPAKs also use lightweight high-tech fabrics and our patented ExoSpine™ to reduce the war-fighter's burden. AttackPAK can also create customized solutions for the challenges of the modern battlefield.

The newest addition to our line of products is a light weight medical bag, which can be made with Dyneema fabric for durability and weight savings. The standard pack cuts a 1 1/2 lbs of parasitic weight off of the leading med pack, and can be further reduced with cutting edge materials. Built with user customization in mind.

The team medic will appreciate quick entry, color coded supplies and removable organizers that can be customized to individual preference. Equipped with a placard interface, splint shelf organization, and instant, full splay access to all of the contents. The Pulse is the only choice for critical care in the field.

Pulse Med Pack

ILCS Foundation:
